Lead Screw Systems...

dry-tech® ... don't lubricate ... igus® ...
technology

dryspin® technology for high helix threads

The dryspin® technology is based on wear-resistant igus® high performance polymers specially developed for lead screw units. dryspin® therefore provides an even longer service life and more efficiency for high helix designs. Due to its freedom from lubricants, dryspin® lead screw units are suitable for applications, in clean and hygienic environment.

dryspin® benefits on video
 ▶ www.igus.eu/dryspin

Typical application areas:

- Lab automation ● Closing units
- Automotive ● Medicine ● Handling

max. +50 °C
 min. ±0 °C

Detailed technical data

According to EC Directive 2011/65/EU (RoHS 2)
 Restriction of (using certain) hazardous substances

Better efficiency through optimised thread angle

Improved service life due to asymmetry

Excellent corrosion and chemical resistance with stainless Steel 1.4301

Lead screw nut made from lubricant-free igus® high performance polymers

Material selection: iglidur® J (standard), iglidur® A180 (FDA-compliant)

Pitch 2–80 mm, Diameter ø 6–18 mm

Precision / nominal dimension -0.1 in diameter

Quiet operation with vibration dampening, gained by thread geometry

dryspin® high helix lead screws

- Excellent corrosion and chemical resistance with stainless Steel 1.4301
 - Diameter ø 6 - 18 mm
 - Precision /nominal dimension -0.1 in Ø
- ▶ Page 6

dryspin® cylindrical lead screw nuts

- Lubricant-free due to igus® high-performance polymers
 - Efficient and quiet operation
 - Maintenance-free dry operation
- ▶ Page 7

dryspin® lead screw nuts with flange

- Dirt resistant and corrosion-free
 - Round flange
 - Space-saving more compact flange for easy access
- ▶ from page 8

dryspin® zero backlash lead screw nut

- Integrated zero-backlash system with spring pretension
 - Minimum backlash
 - For precise positioning
- ▶ Page 10

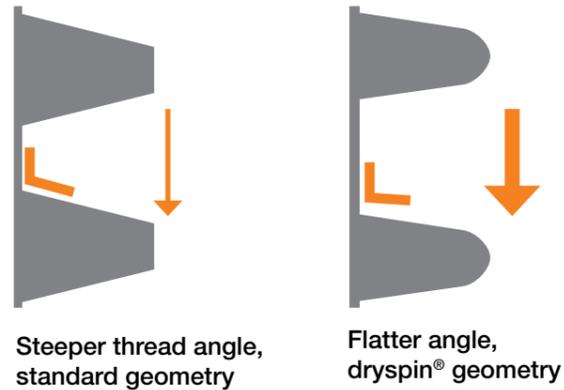

dryspin® accessories

- Lead screw support blocks for dryspin® high helix lead screws
 - Nut clamp for dryspin® lead screw nut
 - drylin® E lead screw motor with dryspin® technology
- ▶ Page 11

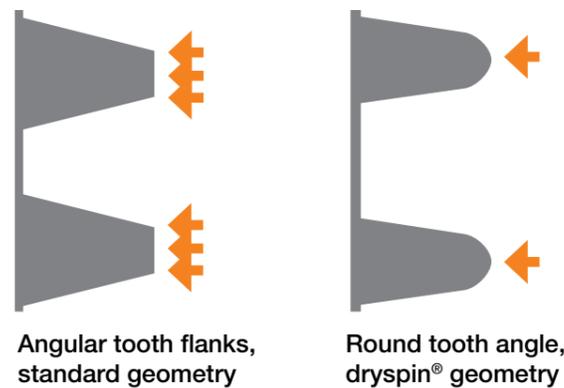

Better efficiency due to optimised thread angle

Due to a flatter thread angle of about 30°, in dryspin® high helix lead screws (similar to a trapezoidal thread) the applied force is efficiently converted into a linear motion. Compared with a steeper thread angle, this means less power loss.

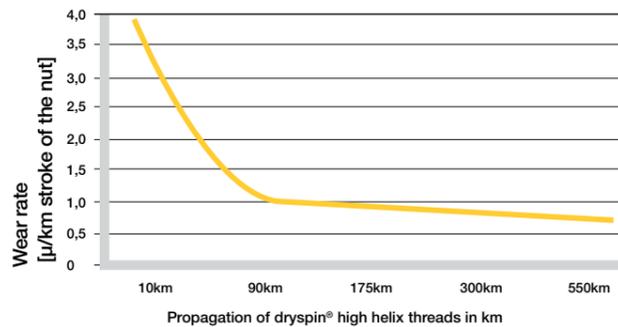

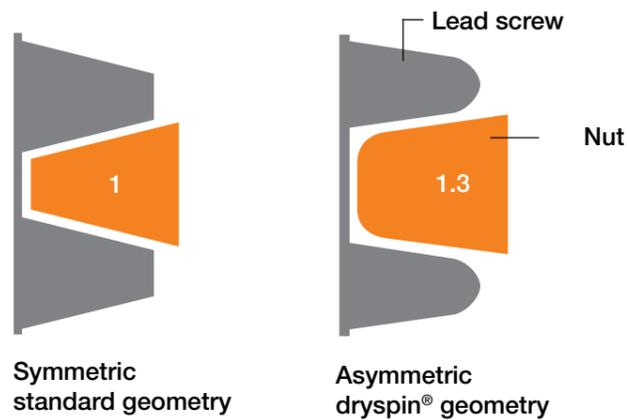

Low noise and vibration dampening due to radius tooth geometry

Due to a rounded tooth flank geometry, the contact surface between the lead screw nut and the lead screw is reduced. Therefore the dryspin® lead screw nuts move without vibration, virtually silent. Because, the greater the contact of two surfaces moving against one another, the more vibrations are transmitted, which can be perceived as a rattle or squeak. The rounded form minimises this effect and the thread moves without lubrication and with little noise.

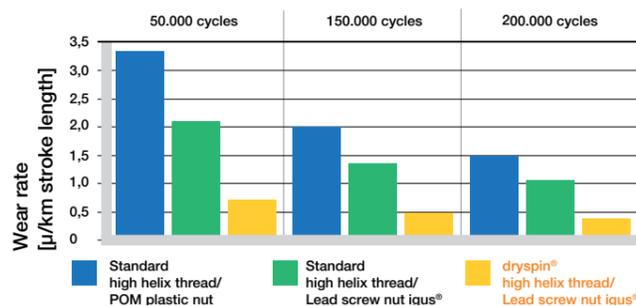

Extended service life due to asymmetry

Due to the larger distances between the individual dryspin® thread pitch, the thread perfectly matches the properties of the lubricant-free igus® high performance polymers. The proportion of the tribologically optimised polymer in the thread pitch can be extended in all sizes by a factor of 1.3. More wear-resistant material and higher levels of efficiency are crucial for up to 5 times higher service life of standard geometries. The larger the lead screw diameter the bigger the impact of this effect. Backlash can be minimised by the use of dryspin® zero-backlash threaded nuts with integrated spring pretension.

Wear test dryspin® high helix thread 10x25, load 175 N, 540 mm stroke, 125 rev/min

Wear test high helix thread 10x50, dryspin® high helix thread/standard high helix thread Load 36 N , 100 rev/min at 50,000/150,000/200,000 cycles

Tested: Lubricant-free iglidur® materials from igus®

Liners, gliding elements and lead screw nuts from drylin® adapted for your application.

Lubricant-free – tested – predictable

- 15,000 tribology tests per year
- More than 300 parallel test machines
- 140 trillion test movements
- Continuous testing of drylin® guides
- www.igus.eu/test

Insight into the igus® plain bearings laboratory

Test rig for service life determination

dry-tech® polymers

igus® high performance polymers are used in all drylin® linear and drive units as well as screw drives. The lubricant is incorporated into the bearing material, rendering the bearing materials suitable for dry-running conditions, e.g. they are maintenance-free for their entire service life.

Material selection

drylin® lead screw nuts are made from tribologically optimised materials. Already during the development phase, the focus is on optimising the friction properties of the drylin® lead screw units, with the objective of attaining the lowest possible wear rates and good friction values.

igidur® J is characterised by the best friction values with low moisture absorption.

► www.igus.eu/J

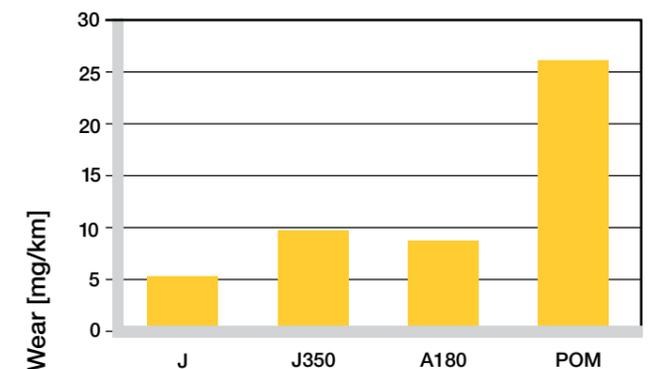

igidur® A180 corresponds to the requirements of the Food and Drug Administration (FDA) and can therefore be used in direct contact with food and medicines.

► www.igus.eu/A180

Service life

Every year, several hundred tests are set up and performed on test rigs in the igus® test laboratory. The results are incorporated into online tools, where the service life and the required torque can be determined.

dryspin® | Accessories

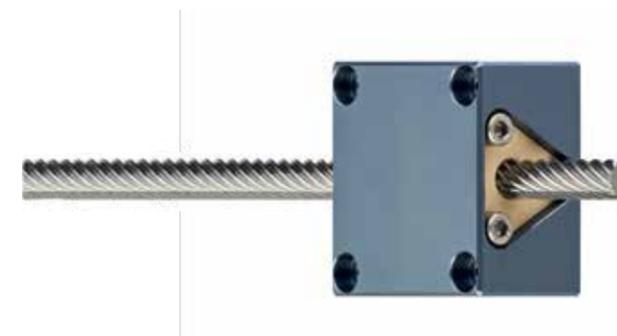

Accessories for the dryspin® technology

igus® offers a large construction kit for dryspin® lead screw units. Bearing housing for lead screws and lead screw nuts enable the construction of an individual linear table. With drylin® E NEMA lead screw motors, dryspin® combines the highest precision with a longer service life.

Lead screw support blocks

- Lead screw support block including clamping rings and lubrication-free plain bearings
- Material: aluminium anodised
- Fixed and floating bearing version available
- ▶ www.igus.eu/SLS

Lead screw nut retainer

- Universal support for dryspin® flange lead screw nut
- Material: aluminium anodised
- Available individually or pre-assembled
- ▶ www.igus.eu/SD-MH

drylin® E lead screw motor with dryspin® technology

- NEMA 11/17/23 stepper motors
- Direct centring of the dryspin® lead screw for highest precision
- Many combination options
- ▶ www.igus.eu/dryspin-motor

Special components

- Required dimension of lead screw nut and standard pin machining configurable online
- Custom machining nuts/lead screw on request

Further solutions with drylin® lead screw units

Lead screws, lead screw nuts, drive technology

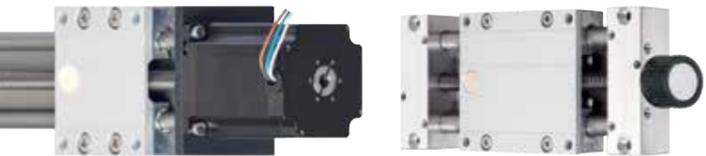

Lead screws

Computing and calculating

Calculate the service life of lead screw units online.

From now on, lead screw units and nuts of the dryspin® technology can also be selected and calculated. The lead screw nuts are made of the wear-resistant igus® high performance polymer iglidur® J. In addition, diverse lead screw and nut materials continue to be available, their suitability for the application, as well as the expected life can be calculated. The selected products can be ordered quickly and easily online. Delivered in 24-48 hrs. Materials are available for high efficiencies, wear resistance, high temperatures, as well as FDA conformity.
